

FRACTIONS

Add/subtract the fractions and simplify the result.

example:

$$1. \quad \frac{4}{6} + \frac{1}{12} = \frac{9}{12} = \frac{3}{4}$$

$$9. \quad \frac{17}{7} + \frac{4}{7} =$$

$$2. \quad \frac{3}{6} - \frac{4}{10} =$$

$$10. \quad \frac{11}{3} - \frac{5}{5} =$$

$$3. \quad \frac{3}{6} + \frac{2}{3} =$$

$$11. \quad \frac{7}{8} + \frac{6}{4} =$$

$$4. \quad \frac{7}{9} - \frac{1}{9} =$$

$$12. \quad \frac{4}{6} - \frac{1}{2} =$$

$$5. \quad \frac{1}{5} + \frac{4}{12} =$$

$$13. \quad \frac{9}{3} + \frac{3}{8} =$$

$$6. \quad \frac{3}{5} - \frac{3}{10} =$$

$$14. \quad \frac{3}{4} - \frac{1}{3} =$$

$$7. \quad \frac{4}{12} + \frac{3}{4} =$$

$$15. \quad \frac{1}{12} + \frac{3}{7} =$$

$$8. \quad \frac{4}{6} - \frac{1}{12} =$$

$$16. \quad \frac{3}{4} - \frac{3}{7} =$$
